TABLE OF CONTENT

1.0 INTRODUCTION

1.1 PURPOSE

This document represents the Software Requirement Specification (SRS) for the PSM Management System. Its purpose is to provide a clear and detailed overview, requirement and the goals of the system. It also describes what the system will do and how it will perform.

1.2 SYSTEM IDENTIFICATION

System Title : PSM Management System

System Abbreviation : PSMMS

System Identification Number : SRS-PSMMS-2021-V1

1.3 SYSTEM OVERVIEW

This section mainly describes in detail about the PSM Management System. The purpose of this system is to manage students and lecturers who are involved in final year projects. This system has three users being students, lecturers and technicians. Students will be able to manage meetings, manage supervisor(SV) hunting, manage logbooks, manage proposal submission, manage PSM titles and manage inventory usage. Lecturers will be able to manage lecturer expertise, manage profile, view logbook, manage proposal submission and approval, manage PSM title and manage inventory. Technicians will be able to manage inventory only. Users will first have to register and create an account in order to receive access into the system. Once a user is logged in, they can add or edit their profiles. Students can hunt for supervisors for their final year project and key in their desired FYP title based on the main titles offered. Lecturers are able to approve of titles, approve proposal submissions and manage inventory. This system aims to offer a more systemised management of final year projects to ease both lecturers and students of Universiti Malaysia Pahang.

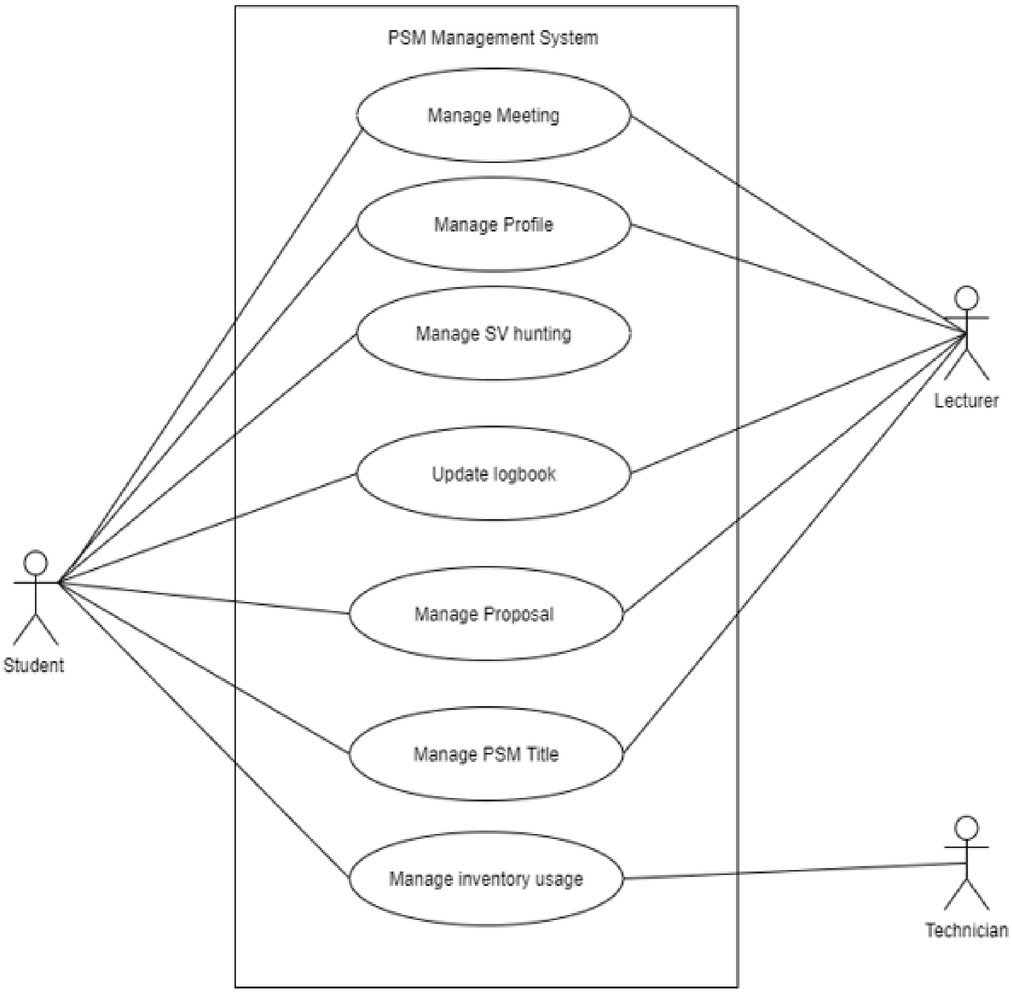
2.0 PRODUCT DESCRIPTION

2.1 PRODUCT FUNCTIONS



NO	FUNCTION	REQUIREMENT
1.	Manage meeting	● This system will enable students to make a meeting reservation ● This system will enable students to view their accepted or rejected request ● This system will enable lecturers to accept students’ meeting requests ● This system will enable lecturers to reject students’ meeting requests
2.	Manage profile	● This system will enable students and lecturers to add their details to their profile. ● This system will enable students and lecturers to edit their details in their profile. ● This system will enable student and lecturer to delete their details in profile ● This system will enable lecturers to add expertise to their profile. ● This system will enable students and lecturers to view their own profile.
3.	Manage supervisor hunting	● This system will enable Student to book their supervisor based on their expertise ● This system enable Lecturer to Approve / Reject the student ● This system enable Lecturer view their student list
4.	Manage Logbook	● This system will enable students to add,edit and delete their minute meeting with their supervisor into the logbook. ● This system will enable students to view their submitted meeting logbook details. ● This system will enable lecturers to view the students’ meeting logbook.
5.	Manage proposal	● This system will enable the student to get the approval of proposal from their lecturer ● This system will enable the lecturer to view the student proposal. ● This system will enable the lecturer to approve or reject the proposal.
6.	Manage title	● This system will enable the lecturer to add the title. ● This system will enable the student to book the title. ● This system will enable the student to view the list of titles.
7.	Manage inventory usage	● This system will enable the student to book the inventory by entering some inventory details. ● This system will enable the student to view the request status. ● This system will enable the lecturer to approve or reject the

		student request inventory’s application. ● This system will enable the lecturer to key in the pick up item after approving the student's inventory request. ● This system will enable the technician to key in the students inventory details.

3.0 SOFTWARE PRODUCT FEATURES

3.1 MANAGE MEETING (NADIATUL ADILA BINTI ZAIDI | CB17036)

Use Case	RID-PSMMS-M01
Brief Description	This use case enables students to make a meeting reservation and enables the supervisor to accept or reject the request.
Actor	Student and lecturer
Pre-Conditions	The users log in into the system
Basic Flow	**Student** 1. This use case starts when students go to the meeting menu. 2. System displays two buttons on the meeting menu page. 3. Students view the two available buttons. 4. Students choose: a. Click Meeting Booking button **[A1: Book meeting]** b. Click Status button **[A2: Check status]** 5. System saves the information to the database. 6. Use case ends. **Lecturer** 1. This use case starts when the lecturers go to the meeting menu. 2. System query requests data from the database and display. 3. Lecturers view two available buttons. 4. Lecturers choose: a. Click Meeting Request button **[A3: Meeting request]**

	b. Click Appointment button **[A4: Check appointment]** 5. System saves the information to the database.
Alternative Flow	**A1: Book Meeting [SRS_REQ_101]** 1. Students click on the <<Meeting Booking>> button. 2. System query requests data from the database and display calendar. 3. Students view the personal calendar. 4. Students click on their preferred date and time. 5. Students click on the <<Book>> button. **[E1: Cancel]** 6. Use case continues to step 5 in Basic Flow. **A2: Check Status [SRS_REQ_102]** 1. Students click on the <<Status>> button. 2. System query requests status from the database and display. 3. Students view the status of the requested meeting. **[E2: Cancel Meeting]** 4. Use case continues to step 5 in Basic Flow. **A3: Meeting Request [SRS_REQ_103]** 1. Lecturers click on the <<Meeting Request>> button. 2. System query requests data from the database and display. 3. Lecturers view the list of requested meetings from the students. 4. Lecturers click on the <<Accept>> button. **[E3: Reject meeting]** 5. Use case continues to step 5 in Basic Flow. **A4: Check Appointment [SRS_REQ_104]** 1. Lecturers click on the <<Appointment>> button. 2. System query requests data from the database and display. 3. Lecturers view the personal calendar with students' meeting reminders on it.
Exception Flow	**E1: Cancel [SRS_REQ_105]** 1. Students click on the <<Cancel>> button. 2. System goes back to the meeting menu main page.

	E2: Cancel Meeting [SRS_REQ_106] 1. Students click on the date of the meeting reminder. 2. Students click on the <<Drop>> button. 3. System goes back to the booking meeting menu. 4. Use case continues to step 5 in Basic Flow. **E3: Rejected Request [SRS_REQ_107]** 1. Lecturers click on the <<Reject>> button. 2. Use case continues to step 5 in Basic Flow.
Post-Conditions	1. Students are able to view their accepted or rejected request.
Constrains	-

3.2 MANAGE PROFILE (NATHANIA GRACE MAHADEVAN | CB18166)

Use Case	RID-PSMMS-M02
Brief Description	This use case describes the Manage Profile Module for PSM Management System. This use case enables users to view, delete and edit their profile information.
Actor	Student and Lecturer
Pre-Condition	The user must be successfully registered and logged in.
Basic Flow	**<u>Student</u>** 1. The use case begins when the student clicks the <<Profile>> button on menu bar. 2. System query request status from database and display data on MyProfile page 4. Student is able to : a) View own profile b) Delete own profile **[A1: Delete Profile]** c) Edit details of own profile **[A2: Edit Profile]** 5. The use case ends. **<u>Lecturer</u>** 1. The use case begins when the lecturer clicks the <<Profile>> button on the menu bar. 2. System will retrieve lecturer information from the database and display data on MyProfile page. 4. Lecturer is able to : b) View own profile b) Delete own profile **[A1: Delete Profile]** c) Edit details of own profile **[A2: Edit Profile]** 5. The use case ends.

	A1: Delete Profile [SRS_REQ_201] 1. User chooses to delete profile. 2. User clicks <<Delete>> button. 3. System displays pop-up message “ Are you sure you want to delete profile?” 4. User clicks the <<OK>> button. **[E1: Cancel Delete]** 5. System removes data from the database. 6. System display pop up confirmation message. 3. Use case continues in step 2 in basic flow. **A2: Edit Profile [SRS_REQ_202]** 1. User chooses to edit profile. 2. User clicks <<Edit>> button. 3. System will display the editable user’s profile details. 4. User edits their profile details. 5. User clicks on the <<Save >> button.**[E2: Cancel Edit]** 6. The system will save all information that has been saved and added and updates information in the database. 7. System displays a pop-up message “ Details successfully saved.” 8. User clicks the <<OK>> button. 9. The system will display the updated user details in MyProfile 10. Use case continues in step 2 in basic flow.
Exception Flow	**E1: Cancel Delete [SRS_REQ_203]** 1. System will display a pop-up message. 2. The user clicks on <<Cancel>> button. 3. System request cancel delete.

	3. System will query data and display user details in the MyProfile page of the user. **E2: Cancel Edit [SRS_REQ_204]** 1. User click on <<Cancel>> button. 2. A confirmation message will pop up. 3. User clicks <<OK>> button. 4. The system will query data and displays the users details in MyProfile page.
Post-condition	All changes should be saved to database.
Rules	Users must give valid information which is required by system.
Constraints	-

3.3 MANAGE SUPERVISOR HUNTING (MANGGALESWARY DIYA DAS | CB18168)

Use Case Name	RID-PSMMS-M03
Brief Description	This use case is to enable the student to book the supervisor based on their expertise and the supervisor able to approve or reject the list of the student.
Actor	Student and Lecturer
Pre-Condition	The user must log in to the system.
Basic Flow	<u>**Students**</u> 1. The use case begins when the student clicks on the <<Supervisor>> button on the menu bar. 2. System query request status from database and display data on Book Supervisor page. 3. Students able to: a) View lecturer expertise. b) Book the Supervisor. **[A1: Book SV]** 4. The use case ends. <u>**Lecturer**</u> 1. The use case begins when the lecturer clicks on the <<Student>> button on the menu bar.. 2. System query request status from database and display data on Student List page. 3. Lecturer clicks <<Approve>> or <<Reject>> button near the student name 4. The system saves the student list to the database. 5. Lecturer view the student list under their supervision 6. The use case ends.

Alternative Flow	**A1: Book SV [SRS_REQ_301]** 1. Student click on any expertise of the lecturer in the drop down button . 2. Student choose the supervisor based on their expertise. 3. Student click on the <<Confirm>> button. **[E1: Cancel Book]** 4. The system will save all information that has been saved. 5. System displays a pop-up message “ The supervisor will be notified” 6. The student clicks the <<Done>> button. 7. Use case continues in step 2 in basic flow
Exception Flow	**E1: Cancel Book [SRS_REQ_302]** 1. Student click on the <<Cancel>> button 2. Confirmation message will pop up 3. User clicks <<OK>> button 4. The system query data from the database and display the Supervisor Booking page.
Post Condition	The list of the students are successfully saved and updated
Constraints	None

3.4 MANAGE LOGBOOK (NORHANIZA BINTI SYAFRIZAL | CB19027)

Use Case ID	RID-PSMMS-M04
Use Case Name	Manage Logbook
Brief Description	This use case describes the Manage Logbook Module for PSM Management System. This use case enables students to view, delete and edit their minute meeting with the supervisor into the logbook and enable the lecturer to view the logbook list and logbook details.
Actor	Student and Lecturer
Pre-Condition	The user must be successfully registered and logged in into the system.
Basic Flow	1. The use case begins when the student clicks the <<Logbook>> button on the side menu bar. 2. System query request data from logbook database and display data on Logbook List page **[SRS_REQ_401]** 3. Students click <<View>> at the logbook list page. **[A1: View details] [SRS_REQ_402]** 4. Students click <<Add New Entry>> at the logbook list page. **[A2:Add New Entry] [SRS_REQ_403]** 5. Students click <<Edit>> at the logbook list page. **[A3: Edit details]**. **[SRS_REQ_404]** 6. Students click <<Delete>> at the logbook list page. **[A4: Delete Logbook Entry] [SRS_REQ_405]** 7. Lecturer clicks the <<Logbook>> button on the side menu bar. 8. System query request data from logbook database and display data on Lecturer Logbook List page **[SRS_REQ_406]** 9. Lecturer click <<View>> at the logbook list page. **[A5: Lecturer View Details] [SRS_REQ_407]** 10. The use case ends.

A1: View Details[SRS_REQ_402]

1. Student clicks <<View>> button at logbook list page.
2. System query request data from logbook database and display selected logbook details
3. Use case continues in step 10 in basic flow.

A2: Add New Entry [SRS_REQ_403]

1. Student clicks <<Add New Entry>> button.
2. System displays form of logbook for user to keyin the new entry
3. User keyin data into the logbook form
4. User clicks the <<Submit>> button.
5. System displays a pop-up message for confirmation of submission.
6. User clicks the <<Continue>> button.
7. System saves new data into the logbooks table in psm database.
8. System displays a pop-up message for successful add.
9. Use case continues in step 10 in basic flow.

A3: Edit Logbook [SRS_REQ_404]

1. Student clicks <<Edit>> button.
2. System query request data from logbook database and display the data
3. System allows users to edit the displayed data
4. User keyin edited data
5. Student clicks the <<Submit>> button.
6. System displays a pop-up message for confirmation of submission of the edited data.
7. Student clicks the <<Continue>> button.
8. System updates edited data into the logbooks table in psm database
9. Use case continues in step 10 in basic flow.

A4: Delete Logbook Entry [SRS_REQ_405]

1. Student clicks <<Delete>> button.
2. System displays a pop-up message for confirmation of deletion on the selected logbook entry.
3. User clicks the <<Yes>> button.
4. System removes data from the logbooks table in psm database.
5. Use case continues in step 10 in basic flow.

	A5: Lecturer View Details[SRS_REQ_407] 1. Lecturer clicks <<View>> button at logbook list page. 2. System query request data from logbook database and display selected logbook details 3. Use case continues in step 10 in basic flow.
Exception Flow	none
Post-Condition	The records of minute meetings are updated to the logbook database.
Constraints	none

3.5 MANAGE PROPOSAL (NUR NADIA SYAKIRAH BINTI MOHD SAUKI | CB19045)

Use Case ID	RID-PSMMS-M05
Brief Description	This use case enables the student to submit their proposal to the lecturer. It also allows the lecturer to review the proposal and decide whether to accept or reject the proposal.
Actor	The event is driven by students and lecturers.
Pre-Conditions	The users must log in into the system.
Basic Flow	Student 1. The use case begins when the student enters the “Manage Proposal”. 2. System display View My Request’s page 3. Student clicks <<Add Request>> button 4. System query the data from the database and display. 5. Student details will be displayed. 6. Students choose their lecturer and upload the proposal. 7. Students click <<Submit>> button. 8. System save the data to the database 9. System display back View My Request’s page. 10. Student will be able to: a. View the status of request **[A1: View Status]** b. Edit their request **[A2: Edit request]** c. Delete their request **[A3: Delete request** 11. The use case ends. Lecturer 1. The use case begins when the lecturer enters the “Manage Proposal”. 2. System query the data from the database and display. 3. System displays the list of requests with status 4. The lecturer selects a proposal to view it. 5. The lecturer updates the status by clicking <<Approve>> or <<Reject>> button. 6. The use case ends.

Alternative Flow	**A1: View Status**. **[SRS_REQ_501]** 1. Students click the <<View Status>> button. 2. System query the data from the database and display. 3. Students view the status of the proposal. 4. Student clicks <<Back>> button. 5. The use case continue on Step 11 in basic flow **A2: Edit Request [SRS_REQ_502]** 1. Student click the <<Edit>> button 2. System query the data from the database and display. 3. Students edit the request and click <<Save>> button 4. System save the updated data to the database 5. The use case continues on Step 11 in basic flow. **A3: Delete Request [SRS_REQ_503]** 1. Student click the <<Delete>> button 2. System removes data from the database 3. The use case continue on Step 11 in basic flow
Exception Flow	N/A
Post-Conditions	The student will be able to submit their proposal to the system and get the approval from the lecturer.

3.6 MANAGE TITLE (PUTERI IDAYU ZULAIKA BT ZAFRI | CB19032)

Use Case ID	RID-PSMMS-M06
Brief Description	This use case is initiated by a student and lecturer. It provides the student with the capability to book the title. The lecturer can add a new title and edit the previous title. The lecturer also can give approval for titles that have been booked by students.
Actor	Students and lecturer
Pre-Conditions	The user is already logged into the system.
Basic Flow	1. The use case begins when the student goes to the title menu. 2. The system query requests status from database and display. 3. The student views the status of the booked title. 4. The student clicks the <<Book Title>> button. [A1: Book title] 5. The system saves the title information to the database. 6. The lecturer goes to the title menu. 7. The system query requests status from database and display. 8. The lecturer views the list of the titles. 9. The lecturer clicks the <<Delete>> button at any title. [A2: Delete title] 10. The system saves the title information to the database. 11. The lecturer clicks the <<View>> button at any title. [A3: View title] 12. The system saves the title information to the database. 13. The lecturer clicks the <<Add>> button at any title. [A4: Add title] 14. The system saves the title information to the database. 15. The lecturer clicks the <<Edit>> button at any title. [A5: Edit title] 16. The system saves the title information to the database. 17. The lecturer clicks the <<Approve>> button at any title. [A6: Approve title] 18. The system saves the title information to the database. 19. The use case ends.

Alternative Flow	**A1: Book title [SRS_REQ_601]** 1. The student clicks the book button. 2. The system will display the title application form. 3. The student enters the information and clicks submit. 4. The system verifies and updates the database. **A2: View title [SRS_REQ_602]** 1. The lecturer clicks the view button. 2. The system query the data from the database and display. 3. The lecturer views the title information. **A3: Edit title [SRS_REQ_603]** 1. The lecturer clicks the edit button. 2. The system query the data from the database and display. 3. The lecturer changes the previous information and clicks save. 4. The system verifies and updates the database. **A4: Delete title [SRS_REQ_604]** 1. The lecturer clicks the delete button. 2. The system deletes the data and updates the database. **A5: Add title [SRS_REQ_605]** 1. The lecturer clicks the add button. 2. The system displays the add title form. 3. The lecturer enters the title information and clicks submit. 4. The system verifies and updates the database. **A6: Approve title [SRS_REQ_606]** 1. The lecturer chooses <<approve>> option at title status. 2. The system verifies and updates the database.

3.7 MANAGE INVENTORY USAGE (NUR FATIN SYAHIDAH BINTI MOHD ZAMRI | CB19040)

Use Case name	RID-PSMMS-M07
Brief Description	This use case is initiated by the student, lecturer and technician. It provides the student with the capability to apply the inventory by entering some details like name of inventory, quantity, date, and time. The system will check the availability for the application and if the item is available, the lecturer will accept the application or vice versa. The lecturer will pick up the requested item from the technician and the technician key in all the details of the inventory in the system. The technician can also view the list of inventory usage made by students.
Actor	Student, lecturer and technician
Pre-Conditions	The students, lecturer and technician already login to the system.
Basic Flow	Student 1. Use cases start when the student clicks the “Inventory” button. 2. System will show to the student either to choose for the New Request or Request Status. 3. The student clicks <<Request Inventory>>. **[A1: Request Inventory]** 4. System will display the request form. 5. The student will search for items. 6. System will query from the database the user requested item and display it to the student. 7. The student select and book the item 8. System saves the booking information to the database. 9. System will show to the student either to choose for the New Request or Request Status. 10. The student selects to view the <<Request Status>>. **[A2 : Request status]** 11. System query request status from database and display. 12. The student views the request status . 13. Use case end. Lecturer 1. Use cases start when the lecturer clicks the “Inventory” button.

	2. System will show to the user either to choose for the Student Request Status or Pick Up Item. 3. Lecturer clicks <<Student Request Status>>. 4. System will query the request status data from the database and display it to the user. 5. The lecturer can choose either to approve or reject the application. **[A3 : Approve or reject application]** 6. System saves the data into the database. 7. System will show to the user either to choose for the Student Request Status or Pick Up Item. 8. The lecturer clicks <<Pick Up Item>>. **[A4 :Pick Up Item]** 9. System will display a pick up form. 10. Lecturer key in the details for the pick up item like name of item, quantity, and pick up date. 11. System saves the details to the database. 12. Use case end. Technician 1. Use cases start when the technician clicks the “Inventory” button. 2. System will show to the user to choose for the Key In Details. 3. Technician clicks <<Key In Details>>. **[A5 : Key In Details]** 4. System will display the key in detailed form. 5. Technician will key in the details for the item like student name, student ID, name of item, quantity, time, pick up date and return date. 6. System saves the details to the database. 7. Use case end.

Alternative Flow	**A1 : Request inventory [SRS_REQ_701]** 1. The student clicks the <<Request Inventory>> button. 2. The student enters the name of inventory, quantity, date, and time. 3. System verify data and save to the database. **A2 : Request status [SRS_REQ_702]** 1. The student clicks the <<Request Status>> button. 2. System needs to retrieve data from the database and display it to the user. 3. The student views the application whether it is approved or rejected. **[E1 : Request Rejected]** **A3 : Approve or Reject application [SRS_REQ_703]** 1. The lecturer clicks the <<Student Request Status>> button. 2. System needs to retrieve data from the database and display it. 3. The lecturer clicks to approve or reject applications. 4. Lecturer click submit. 5. System verify and update to the database. **A4 : Pick Up Item [SRS_REQ_704]** 1. The lecturer clicks the <<Pick Up Item>> button. 2. Lecturer key in the details for the pick up item like name of item, quantity, and pick up date and clicks submit. 3. System verify data and save to the database. **A5 : Key In Details [SRS_REQ_705]** 1. The technician clicks the <<Key In Details>> button. 2. Technician will key in the details for the item like student ID, student name, name of item, quantity, pick up date and return date. 3. System verify data and save to the database.
Exception Flow	**E1 : Request Rejected [SRS_REQ_706]** 1. The student clicks the <<Request Status>> button. 2. System needs to retrieve data from the database and display it to the user. 3. Student view. 4. If the request has been rejected, the student needs to make a new application by clicking the <<Request Inventory>> button. 5. The student enters the name of inventory, quantity, date, and time and clicks submit. 6. System verify data and save to the database.

Post-Conditions	The inventory usage list is successful and updated.
Constraints	None
