1. INTRODUCTION

1.1 Purpose

The purpose of the Software Design Document (SDD) is to provide a description of the design of a PSM Management system fully enough to allow for software development to proceed with an understanding of what is to be built and how it is expected to be built. The Software Design Document provides information necessary to provide a description of the details for the PSM Management system to be built. This document explains the features, user interface and all the functionality of the system provided with clear graphical and diagram illustration to give a better understanding of the project. This document is intended for both the developers and the stakeholder of the system besides assisting designers and developers in software development lifecycle (SDLC) processes. This document is intended to be a flexible document as it will change and expand within time throughout the development of the system.

1.2 System Identification

Document Type: SDD

Abbreviation: PSMMS (PSM MANAGEMENT SYSTEM)

Establish Year: 2021

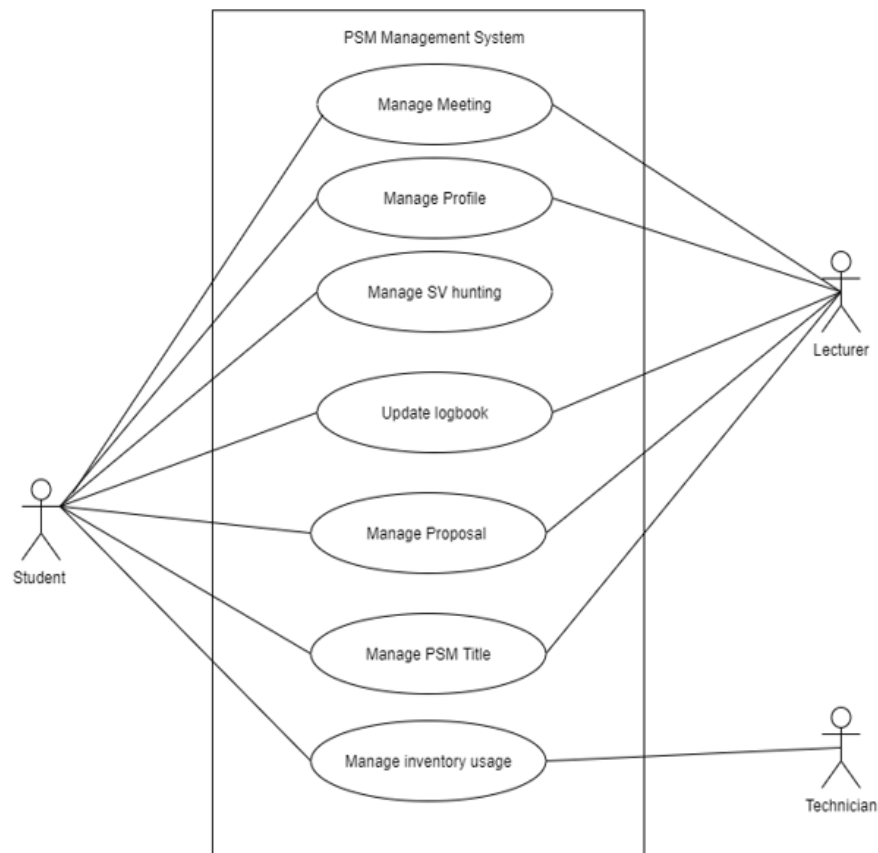

V01: Version 1

SDD-STARLIGHT TECH-PSMMS-2021-V01

1.3 System Overview

This section mainly describes in detail the PSM Management System. The purpose of this system is to manage students and lecturers who are involved in final year projects. This system has three users being students, lecturers and technicians. Students will be able to manage meetings, manage

supervisor(SV) hunting, update logbooks, manage proposal submission, manage PSM titles and manage inventory usage. Lecturers will be able to manage lecturer expertise, manage profile, view logbook, manage proposal submission and approval, manage PSM title and manage inventory. Technicians will be able to manage inventory only. Users will first have to register and create an account in order to receive access to the system. Once a user is logged in, they can add or edit their profiles. Students can hunt for supervisors for their final year project and key in their desired FYP title based on the main titles offered. Lecturers are able to approve titles, approve proposal submissions and manage inventory. This system aims to offer more systemised management of final year projects to ease both lecturers and students of Universiti Malaysia Pahang.

NO	FUNCTION	REQUIREMENT
1.	Manage meeting	• This system will enable students to make or cancel a meeting booking. • This system will enable students to view their accepted or

		rejected requests. • This system will enable lecturers to view and accept students' meeting requests. • This system will enable lecturers to reject students' meeting requests. • This system will enable lecturers to view reminder of the accepted meeting
2.	Manage profile	• This system will enable students and lecturers to add, edit or delete their details to their profiles. • This system will enable lecturers to add expertise to their profiles. • This system will enable students and lecturers to view their own profile.
3.	Manage supervisor hunting	• This system will enable Student to book their supervisor based on their expertise • This system enables the lecturer to Approve / Reject the student • This system enables lecturer to view their student list
4.	Manage Logbook	• This system will enable students to add,edit and delete their minute meeting with their supervisor into the logbook. • This system will enable students to view their submitted minute meeting logbook details. • This system will enable lecturers to view the students' meeting logbooks.
5.	Manage proposal	• This system will enable the student to get the approval of the proposal from their lecturer • This system will enable the lecturer to view the student proposal. • This system will enable the lecturer to approve or reject the proposal.
6.	Manage title	• This system will enable the lecturer to add, edit, delete the title. • This system will enable the lecturer to give approval for the title that is applied by the student. • This system will enable the student to view the list of titles. • This system will enable the student to book the list of titles.

7.	Manage inventory usage	• This system will enable the student to book the inventory by entering some inventory details.
----	------------------------	---

		• This system will enable the student to view the request status. • This system will enable the lecturer to approve or reject the student request inventory's application. • This system will enable the lecturer to key in the pick up item after approving the student's inventory request. • This system will enable the technician to key in the students' inventory details.

GENERAL ARCHITECTURE

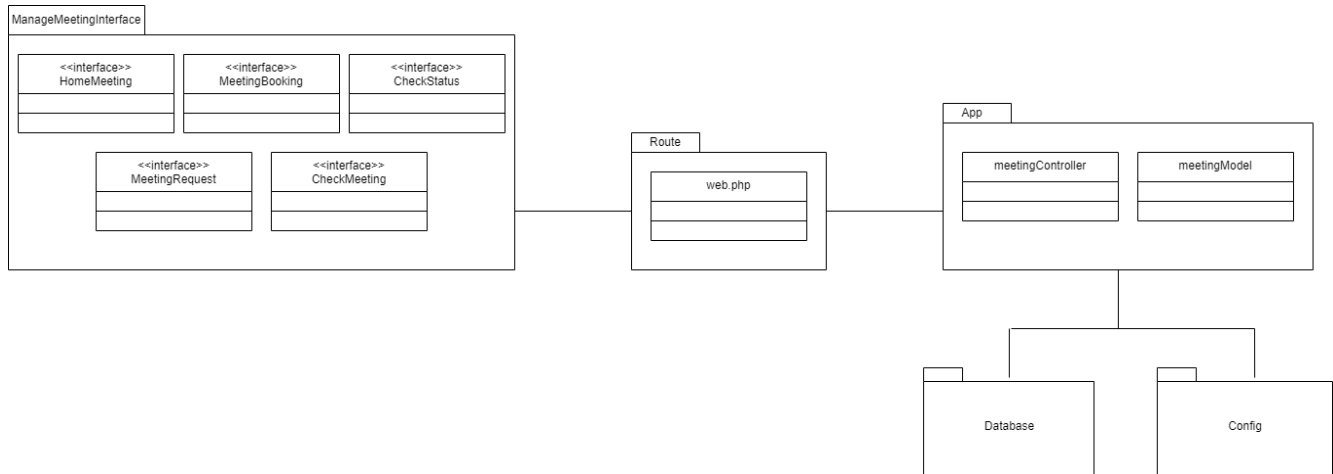

3.0 Layered Architecture

3.1 Application Layer

3.1.1 Manage Meeting [SDD-REQ-100]

Nadiatul Adila Binti Zaidi (CB17036)

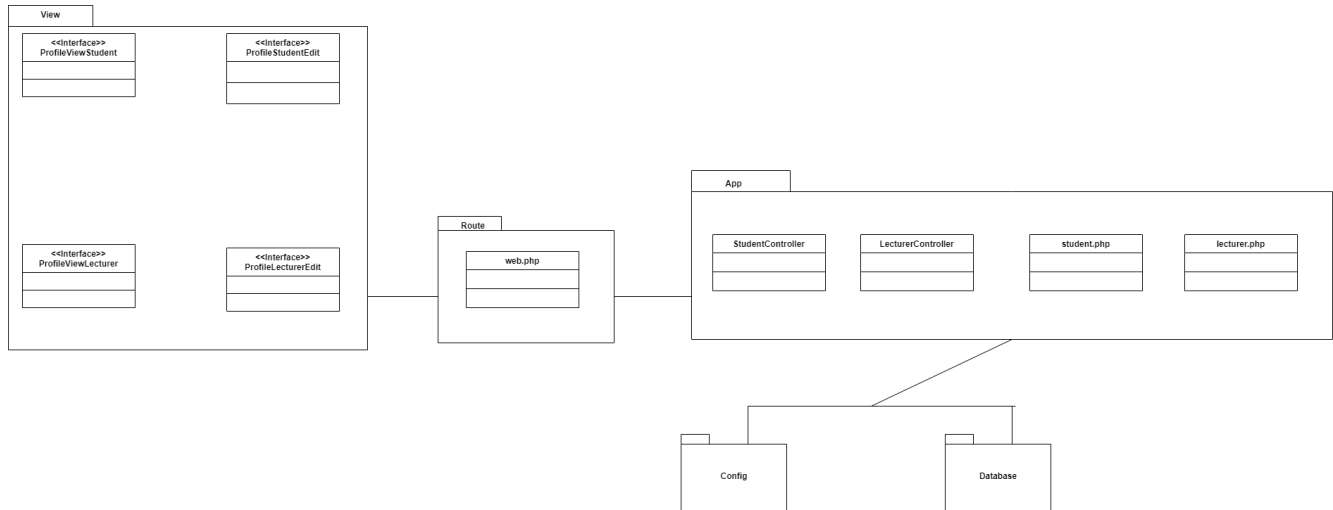

3.1.1.1 Manage Meeting

Class Name	Description
HomeMeeting	The interface allows student and lecturer to view their main page and make selection
MeetingBooking	The interface allows student to request a meeting
CheckStatus	The interface allows student to view their status of requested meeting and cancel the meeting
MeetingRequest	The interface allows lecturer to view the list of requested meetings from students, accept or reject the request
CheckAppointment	The interface allows lecturer to view the reminder of meetings

3.1.2 Manage Profile [SDD-REQ-200]

Nathania Grace Mahadevan (CB18166)

3.1.2.1 ManageProfile

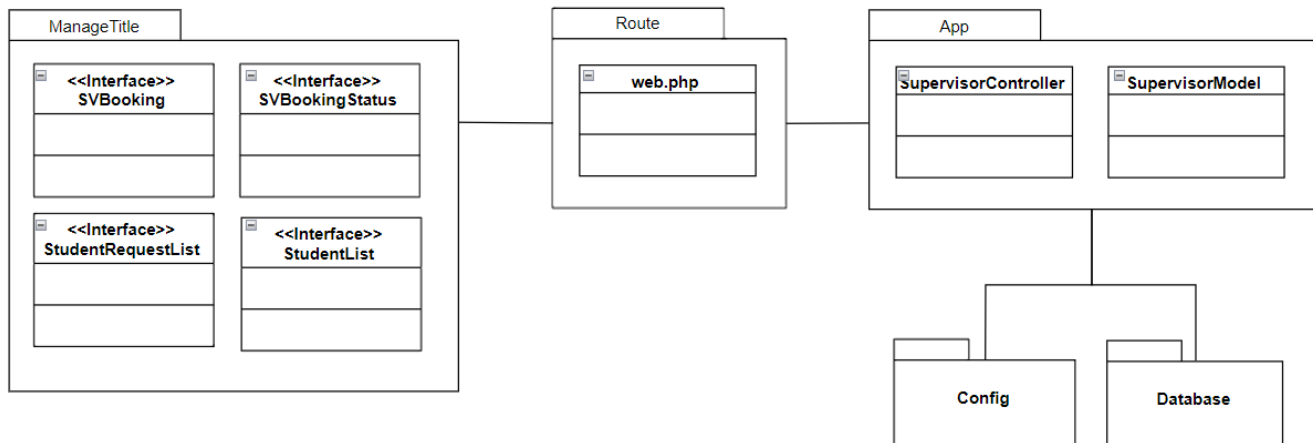

Class Name	Description
ProfileViewStudent	The interface allows students to view or delete their profile
ProfileStudentEdit	The interface allows students to edit and save their details
ProfileViewLecturer	The interface allows lecturers to view or delete their profile
ProfileLecturerEdit	The interface allows lecturers to edit and save their details

3.1.2.2 App

Class Name	Description
StudentController	This controller is used to manage student profile interface and communicate with Profile Model(student.php)
LecturerController	This controller is used to manage lecturer profile interface and communicate with Profile Model(lecturer.php)
student.php (ProfileModel)	This model is used to retrieve and save the data of the student profile details from database
lecturer.php (Profile Model)	This model is used to retrieve and save the data of the student profile details from database

3.1.3 Manage Supervisor Hunting [SDD-REQ-300]

Mangaleswary Diya Das (CB18168)

3.1.3.1 ManageSupervisorHunting

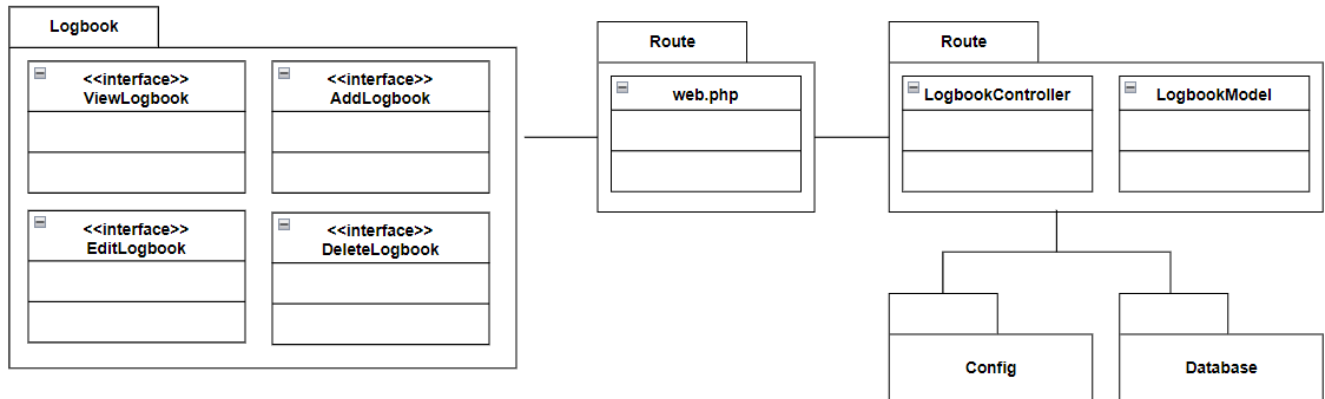

Class Name	Description
SVBooking	The interface allows student to view and book the supervisor
SVBookingStatus	The interface allows student to view status of booking supervisor
StudentRequestList	The interface allows the lecturer to view the list of students that book them and accept or reject the request.
StudentList	The interface allows lecture to view the student list under their supervision

3.1.3.2 App

Class Name	Description
SupervisorController	This controller is used to manage book supervisor interface and communicate with Supervisor Model
SupervisorModel	This model is used to retrieve and save the data of the applied supervisor.

3.1.4 Manage Logbook [SDD-REQ-400]

Norhaniza Binti Syafrizal (CB19027)

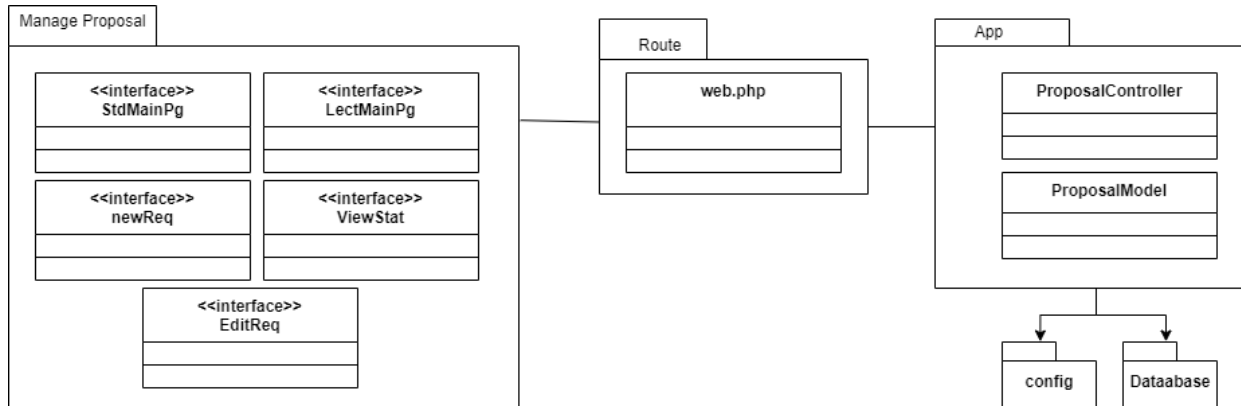

Class Name	Description
index	The interfaces allow students and lecturers to view details of the logbook
add	The interfaces allow students to add new data to the logbook
edit	The interfaces allow students to edit existing data of the logbook
show	The interfaces allow students to delete selected data of logbook

3.1.4.2 App

Class Name	Description
LogbookController	This controller is used to manage update logbook interface and communicate with Logbook Model
LogbookModel	This model is used to retrieve, save and delete the data into the logbook database

3.1.5 Manage Proposal [SDD-REQ-500]

Nur Nadia Syakirah Binti Mohd Sauki (CB19045)

3.1.5.1 ManageProposal

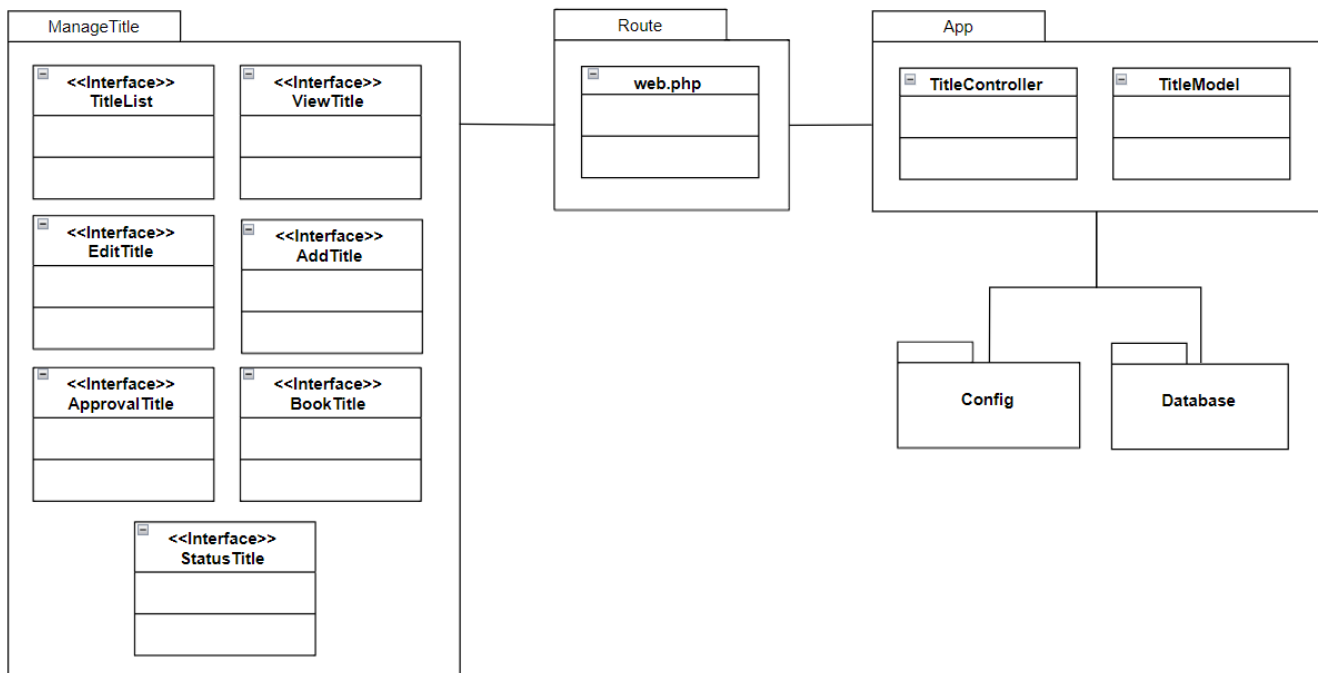

Class Name	Description
LectMainPg	This interface display to the lecturer the list of student request
StdMainPg	This interface allows the student to view their list of request
newReq	This interface allow student to add new request
EditReq	This interface allows the student to edit and save their request
ViewStat	This interface allow the student to view the status of their request whether it is approved or rejected

3.1.5.2 App

Class Name	Description
ProposalController	This controller is used to manage proposal and communicate with Proposal Model
ProposalModel	This user model that is used to save and retrieve data from the proposal data

3.1.6 Manage Title [SDD-REQ-600]

Puteri Idayu Zulaika Binti Zafri (CB19032)

3.1.6.1 Manage Title

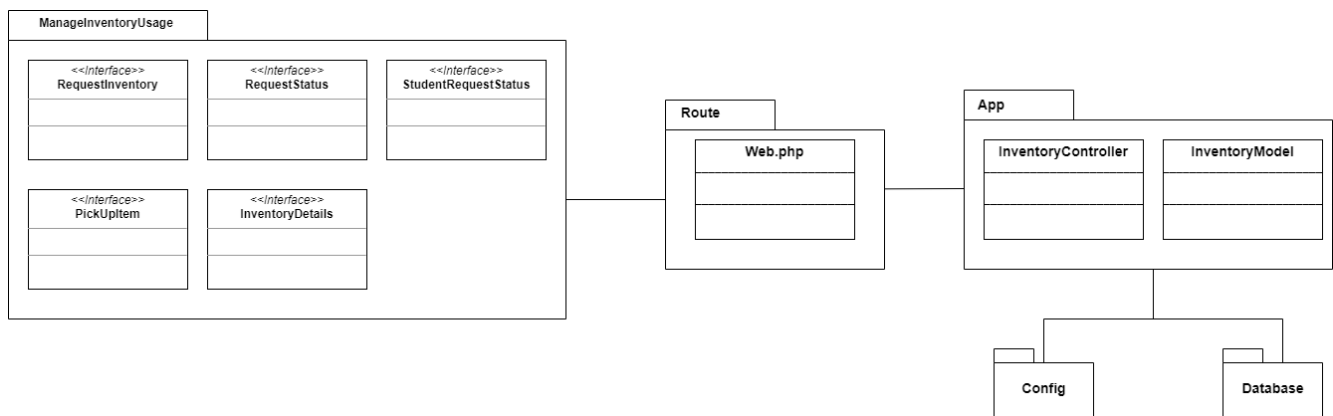

Class Name	Description
TitleList	The interfaces allow the lecturer to view or delete the title list.
ViewTitle	The interfaces allow the lecturer to view the details of the selected title.
EditTitle	The interfaces allow the lecturer to edit the details of the selected title.
AddTitle	The interfaces allow the lecturer to add a new title.
ApprovalTitle	The interfaces allow the lecturer to approve the title for the student.
BookTitle	The interfaces allow the student to book the title.
StatusTitle	The interfaces allow the student to view the status of the booked title.

3.1.6.2 App

Class Name	Description
TitleController	This controller is used to manage the title and communicate with the Title Model
TitleModel	This model is used to retrieve and save the data of the title data

3.1.7 Manage Inventory Usage [SDD-REQ-700]

Nur Fatin Syahidah Binti Mohd Zamri (CB19040)

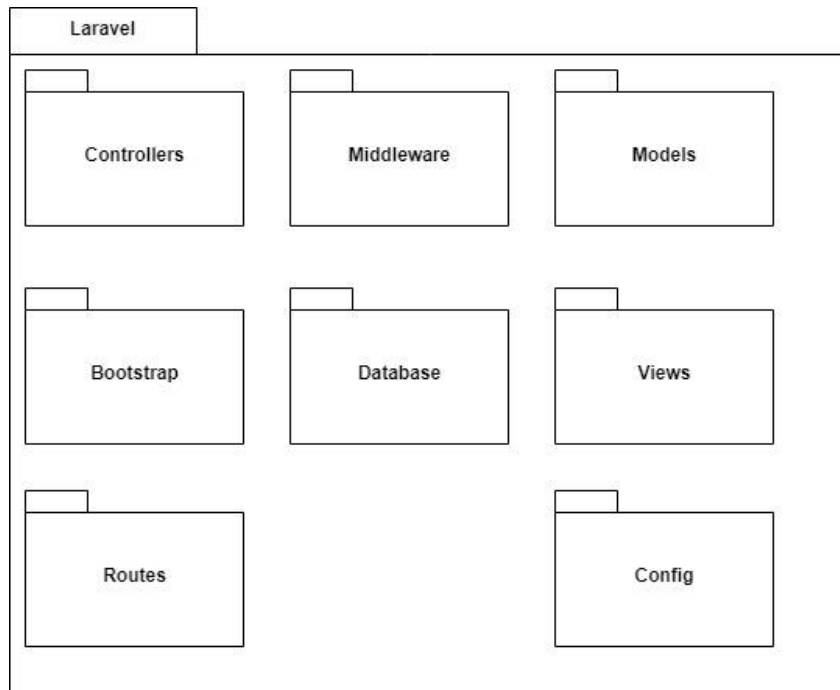

3.1.7.1 Manage Inventory Usage

Class Name	Description
RequestInventory	This interface allows students to request inventory.
RequestStatus	This interface allows students to view the request status whether it is approved or rejected.
StudentRequestStatus	This interface allows the lecturer to view the student's inventory request and can approve or reject the application.
PickUpItem	This interface allows the lecturer to key in the pick-up item form after the student's inventory request has been accepted.
InventoryDetails	This interface allows technicians to key in all the details of the pick-up inventory after the lecturer picks up the student's inventory request.

3.1.7.2 App

Class Name	Description
InventoryController	This controller is used to manage inventory and communicate with the Inventory Model.
InventoryModel	The database that used to store and retrieve the inventory data.

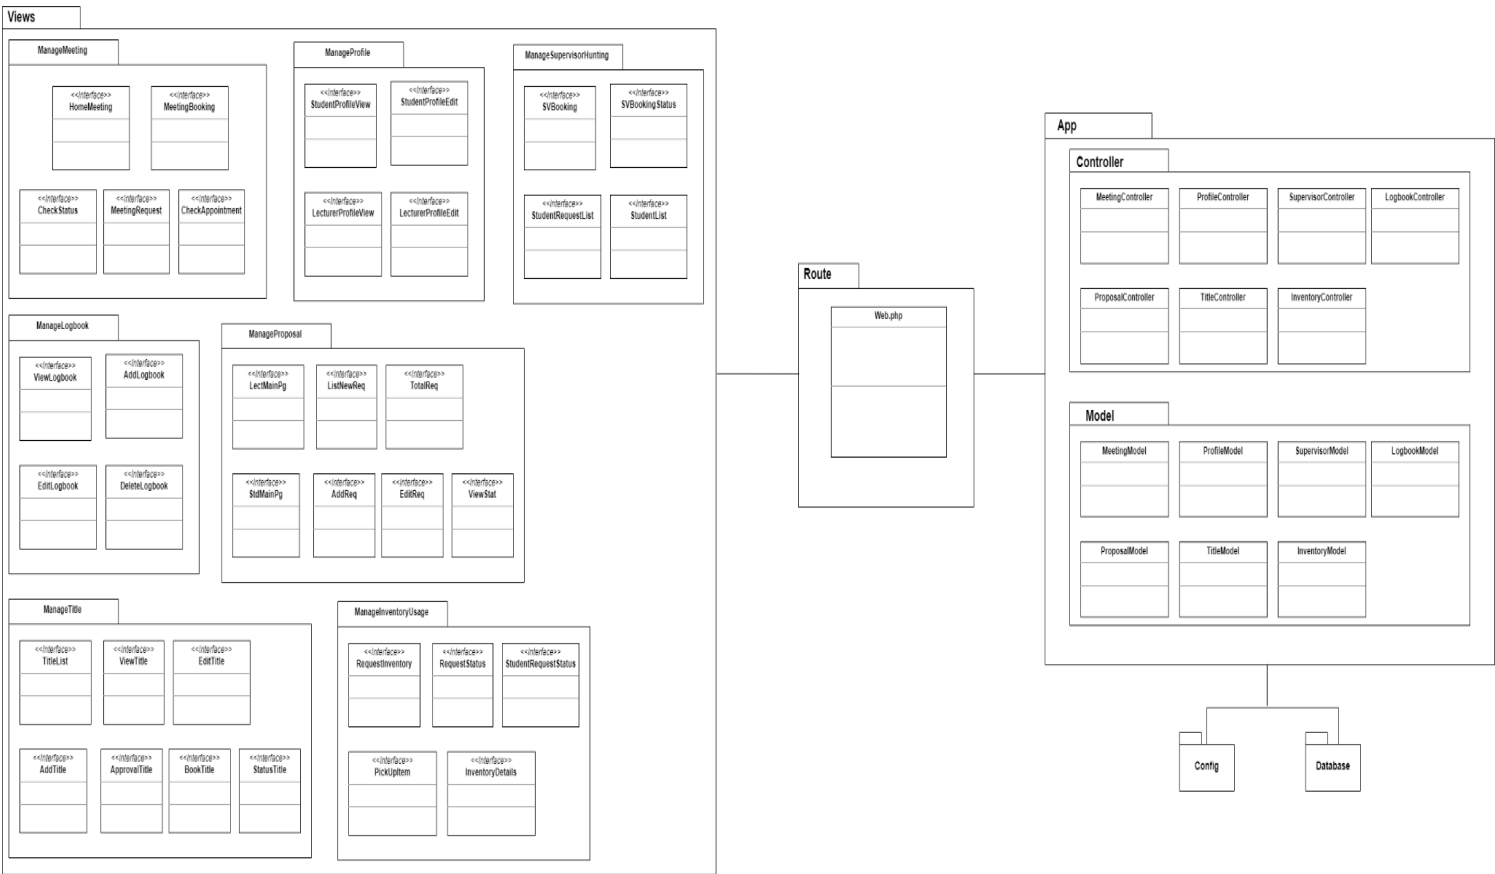

3.2 Framework

Package Name	Description
Controllers	Controllers act as an interface between Model and View components to process all the business logic and incoming requests, manipulate data using the Model component and interact with the Views to render the final output.
Models	Model component corresponds to all the data-related logic that the user works with.
Bootstrap	Bootstrap is an open-source CSS framework directed at responsive, mobile-first front-end web development.
Database	Database is a data structure that stores organized information.
Views	View component is used for all the UI logic of the application.
Middleware	Middleware provides a convenient mechanism for inspecting and filtering HTTP requests entering your application.
Routes	Route is a way of creating a request URL of your application

Config	Database link the information, mail server information, and other core configuration values such as application time zone, and encryption key can all be configured using these configuration files
--------	---

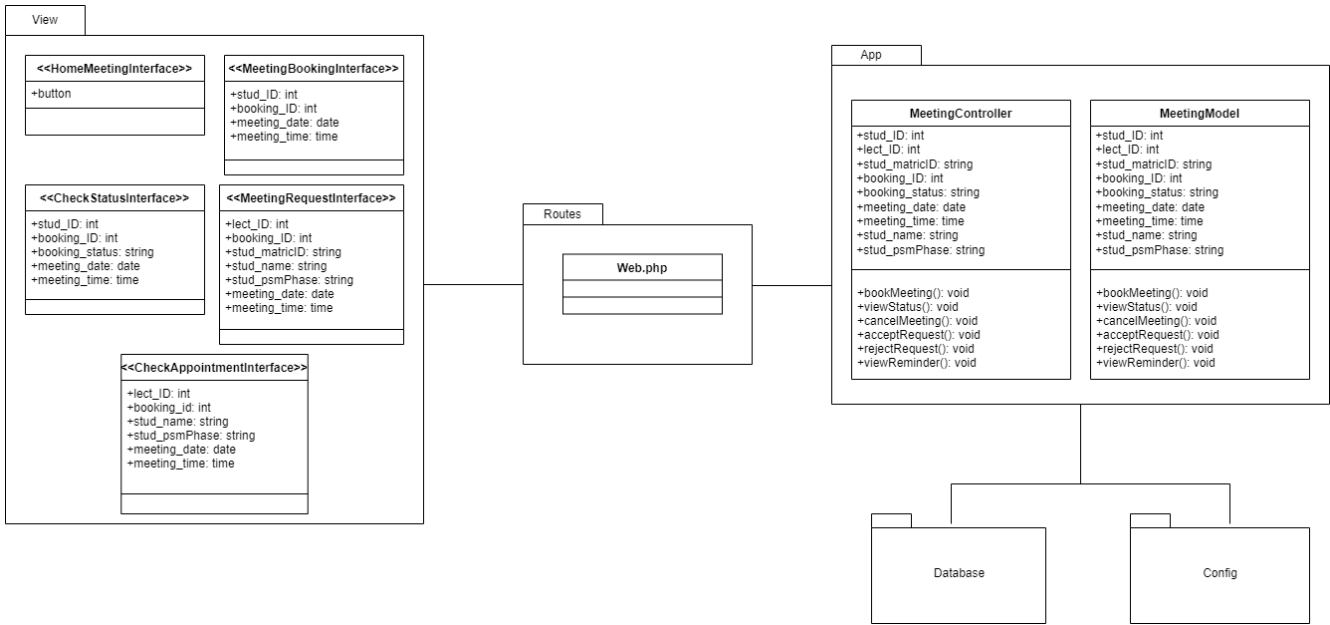

3.3 Package Module

4. DETAIL DESIGN

4.1 Manage meeting [SDD-REQ-100]

Nadiatul Adila [CB17036]

4.1.1 HomeMeeting [SDD-REQ-101]

Class Type	Boundary class	
Responsibility	An interface of main page of Meeting for student and lecturer to view their main page and make selection	
Attributes	Attributes Name	Attributes Type
	Manage Meeting	Button
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.1.2 MeetingBooking [SDD-REQ-102]

Class Type	Boundary class	
Responsibility	An interface that allows students to request a meeting booking	
Attributes	Attributes Name	Attributes Type
	stud_ID	Integer
	booking_ID	Integer
	meeting_date	Date
	meeting_time	Time
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.1.3 CheckStatus [SDD-REQ-103]

Class Type	Boundary class	
Responsibility	An interface that allows student to view the status of their meeting request	
Attributes	Attributes Name	Attributes Type
	stud_ID	Integer
	booking_ID	Integer
	booking_status	String
	meeting_date	Date
	meeting_time	Time
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.1.4 MeetingRequest [SDD-REQ-104]

Class Type	Boundary class	
Responsibility	An interface that allow lecturer to view list of meeting request from student, and approve or reject the request	
Attributes	Attributes Name	Attributes Type
	lect_ID	Integer
	booking_ID	Integer
	stud_matricID	String
	stud_name	String
	stud_psmPhase	String
	meeting_date	Date
	meeting_time	Time
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.1.5 CheckAppointment [SDD-REQ-105]

Class Type	Boundary class	
Responsibility	An interface that allows lecturer to view the reminders of meeting with students	
Attributes	Attributes Name	Attributes Type
	lect_ID	Integer
	booking_ID	Integer
	stud_name	String
	stud_psmPhase	String
	meeting_date	Date
	meeting_time	Time
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.1.6 MeetingController [SDD-REQ-106]

Class Type	Controller class	
Responsibility	This controller is a connection between interface and MeetingModel	
Attributes	Attributes Name	Attributes Type
	stud_ID	Integer
	stud_matricID	String
	lect_ID	Integer
	booking_ID	Integer
	booking_status	String
	meeting_date	Date
	meeting_time	Time
	stud_name	String
	stud_psmPhase	String
Methods	Method Name	Description
	bookMeeting()	To allow student to book meeting
	viewStatus()	To allow student to view status of their requested meeting
	cancelMeeting()	To allow student to cancel meeting
	acceptRequest()	To allow lecturer to accept meeting request
	rejectRequest()	To allow lecturer to reject meeting request
	viewAppointment()	To allow lecturer to view meeting appointment
Algorithm	BEGIN IF viewCalendar() is called THEN connect object view calendar to Meeting Model Return to the meeting booking interface ELSE IF bookMeeting() is called THEN connect object book meeting to Meeting Model Return to the meeting booking interface ELSE IF viewStatus() is called THEN connect object view status to Meeting Model Return to the check status interface ELSE IF cancelMeeting() is called THEN connect object cancel meeting to Meeting Model Return to the check status interface ELSE IF viewMeetingRequest() is called THEN connect object view meeting request to Meeting Model Return to the meeting request interface ELSE IF acceptRequest() is called THEN connect object accept request to Meeting Model	

	Return to the meeting request interface ELSE IF rejectRequest() is called THEN connect object reject request to Meeting Model Return to the meeting request interface ELSE IF viewAppointment() is called THEN connect object view appointment to the Meeting Model Return to the check appointment interface END IF END
--	--

4.1.7 MeetingModel [SDD-REQ-107]

Class Type	Model class	
Responsibility	This model need to save data to database and retrieve data from database	
Attributes	Attributes Name	Attributes Type
	stud_ID	Integer
	stud_matricID	String
	lect_ID	Integer
	booking_ID	Integer
	booking_status	String
	meeting_date	Date
	meeting_time	Time
	stud_name	String
	stud_psmPhase	String
Methods	Method Name	Description
	viewCalendar()	To allow student to view their personal calendar
	bookMeeting()	To allow student to make a meeting request
	viewStatus()	To allow student to view status of their requested meeting
	cancelMeeting()	To allow student to cancel meeting
	viewMeetingRequest()	To allow lecturer to view the list of requested meeting
	acceptRequest()	To allow lecturer to accept meeting request
	rejectRequest()	To allow lecturer to reject meeting request

Algorithm

viewCalendar()

Begin

Select * from meeting where stud_ID=stud_ID

Return data to interface

End

bookMeeting()

Begin

Insert into meeting (booking_ID, booking_date, booking_time) value
(booking_ID, booking_date, booking_time)

Return data to interface

End

viewStatus()

Begin

Select * from meeting where booking_ID=booking_ID

Return data to interface

End

cancelMeeting()

Begin

Delete from meeting where booking_ID=booking_ID

Return data to interface

End

viewMeetingRequest()

Begin

Select * from meeting where booking_ID=booking_ID

Return data to interface

End

acceptRequest()

Begin

Update meeting status=status, stud_ID=stud_ID where
booking_ID=booking_ID

Return data to interface

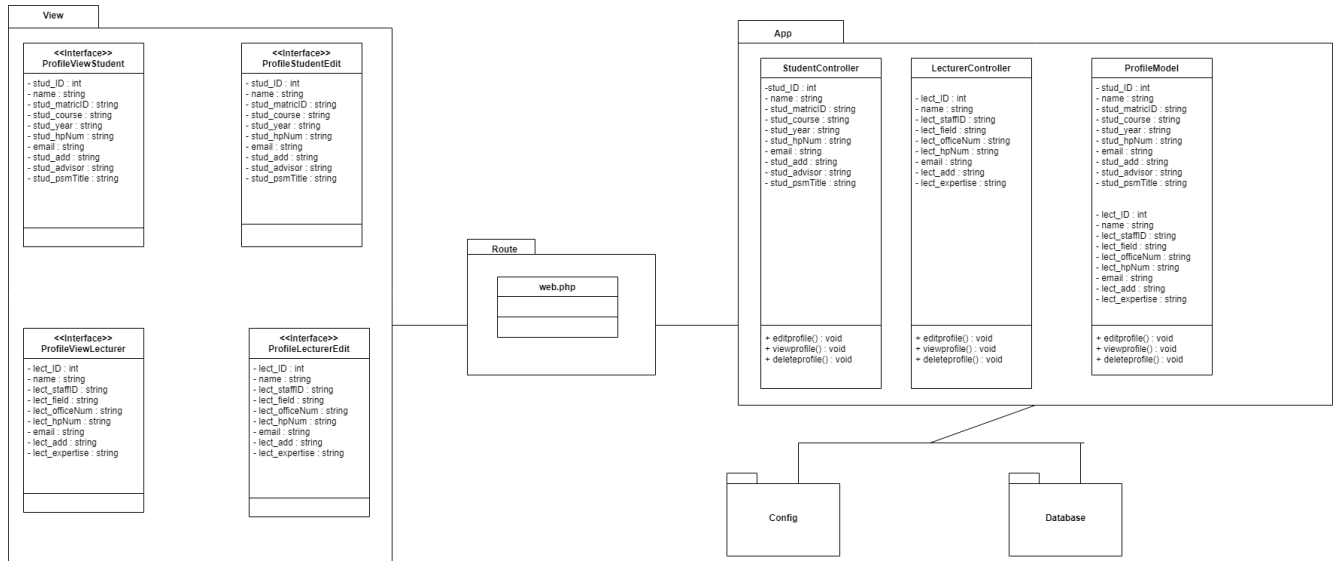

End

rejectRequest()

Begin

Update meeting status=status, stud_ID=stud_ID where
booking_ID=booking_ID

	Return data to interface End viewAppointment() Begin Select * from meeting where booking_ID=booking_ID Return data to interface End
--	---

4.2.1 StudentProfileView [SDD-REQ-201]

Class Type	Boundary class	
Responsibility	An interface that displays the profile details of student.	
Attributes	Attributes Name	Attributes Type
	stud_id name stud_matricID stud_course stud_year stud_hpNum email stud_add stud_advisor stud_psmTitle	Integer String String String String String String String String String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.2.2 StudentProfileEdit [SDD-REQ-202]

Class Type	Boundary class	
Responsibility	An interface that displays editable profile details of students	
Attributes	Attributes Name	Attributes Type

	stud_ID name stud_matricID stud_course stud_year stud_hpNum email stud_add stud_advisor stud_psmTitle	Integer String String String String String String String String String

4.7 Manage Inventory Usage [SDD-REQ-700]

Nur Fatin Syahidah Binti Mohd Zamri [CB19040]

4.7.1 RequestInventory.php [SDD-REQ-701]

Class Type	Boundary class	
Responsibility	An interface to display request inventory form to students	
Attributes	Attributes Name	Attributes Type
	stud_matricID	String
	stud_name	String
	inv_name	String
	quantity	Integer
	date	Date

	req_status	String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.7.2 RequestStatus.php [SDD-REQ-702]

Class Type	Boundary class	
Responsibility	An interface that allows students to view the request status.	
Attributes	Attributes Name	Attributes Type
	inv_ID	Integer
	stud_matricID	String
	inv_name	String
	quantity	Integer
	req_status	String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.7.3 StudentRequestStatus.php [SDD-REQ-703]

Class Type	Boundary class	
Responsibility	An interface that allows the lecturer to approve or reject a student's inventory request.	
Attributes	Attributes Name	Attributes Type
	inv_ID	Integer
	stud_matricID	String
	inv_name	String
	quantity	Integer
	req_status	String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.7.4 PickUpItem.php [SDD-REQ-704]

Class Type	Boundary class	
Responsibility	An interface that allows the lecturer to key in the pick up item form.	
Attributes	Attributes Name	Attributes Type
	inv_ID stud_matricID stud_name inv_name quantity pick_date ret_date remark	Integer String String String Integer Date Date String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.7.5 InventoryDetails.php [SDD-REQ-705]

Class Type	Boundary class	
Responsibility	An interface that allows the technician to key in the inventory details.	
Attributes	Attributes Name	Attributes Type
	inv_ID stud_matricID stud_name inv_name quantity pick_date ret_date remark	Integer String String String Integer Date Date String
Methods	Method Name	Description
	Not applicable	Not applicable
Algorithm	Not applicable	

4.7.6 InventoryController.php [SDD-REQ-706]

Class Type	Controller class	
Responsibility	To control the flow add, request and update inventory of input and output between boundary and model class of inventory	

	Attributes Name	Attributes Type
	inv_ID stud_matricID inv_name quantity date req_status pick_date ret_date stud_name remark	Integer String String Integer String String Date Date String String
	Method Name	Description
	create() viewStatus() updateRequest() add() updateDetail()	This method is to add new inventory requests. This method is to view the request status. This method is to update the inventory request to approve or reject. This method is to add details of the pick up inventory. This method is to update the details of the inventory.
Algorithm	BEGIN IF create() is called THEN create object request to connect to InventoryModel Return to the student request inventory page ELSE IF viewStatus() is called THEN create object status to connect to InventoryModel Return to request status page ELSE IF updateRequest() is called THEN create object update request to connect to InventoryModel Return to the student request status page ELSE IF add() is called THEN create object add to connect to InventoryModel	

	Return to pick up item page ELSE IF updateDetail() is called THEN create object update detail to connect to InventoryModel Return to inventory details page ENDIF END
--	--

4.7.6 InventoryModel.php [SDD-REQ-706]

Class Type	Model class	
Responsibility	To store and retrieve all the information of inventory data	
Attributes	Attributes Name	Attributes Type
	inv_ID stud_matricID inv_name quantity date req_status pick_date ret_date stud_name remark	Integer String String Integer String String Date Date String String
Methods	Method Name	Description
	create() viewStatus() updateRequest() add() updateDetail()	This method is to add new inventory requests. This method is to view the request status. This method is to update the inventory request to approve or reject. This method is to add details of the pick up inventory. This method is to update the details of the inventory.
Algorithm	create()	

```
BEGIN
```

```

quantity, date, time) VALUE(stud_matricID, stud_name, inv_name, quantity,  
date, time)
```

```
END
```

```
viewStatus()
```

```
BEGIN
```

```
    SELECT stud_matricID, inv_name, quantity, req_status
```

```
    FROM Inventory
```

```
    INNER JOIN ReqStatus
```

```
    ON stud_ID = stud_ID
```

```
    ORDER BY stud_ID
```

```
    RETURN data in request status
```

```
END
```

```
updateRequest()
```

```
BEGIN
```

```
    Update ReqStatus set req_status = req_status
```

```
    Return data to student request status interface
```

```
END
```

```
add()
```

```
BEGIN
```

```
    INSERT INTO InvDetail(stud_matricID, stud_name, inv_name,  
quantity, pick_date, pick_time, ret_date)
```

```
    VALUES (stud_matricID, stud_name, inv_name, quantity, pick_date,  
pick_time, ret_date)
```

```
    Return data to pick up item interface
```

```
END
```

updateDetail()

BEGIN

UPDATE InvDetail set ret_date = ret_date

WHERE stud_id = stud_id;

Return data to inventory details interface

END

5. REQUIREMENT TRACEABILITY

5.1 Manage meeting [SRS-REQ-100]

Nadiatul Adila Binti Zaidi (CB17036)

Requirement		Description
Source	Allocated	
SRS_REQ_10 1	SDD_REQ_10 2	Student can make meeting booking
SRS_REQ_10 2	SDD_REQ_10 3	Student can check accepted meeting booking status
SRS_REQ_10 3	SDD_REQ_10 4	Lecturer can view students' request, and accept the request
SRS_REQ_10 4	SDD_REQ_10 5	Lecturer can view students' meeting appointment reminder
SRS_REQ_10 5	SDD_REQ_10 3	Student can cancel meeting booking
SRS_REQ_10 6	SDD_REQ_10 3	Student can check rejected meeting booking
SRS_REQ_10 7	SDD_REQ_10 4	Lecturer can reject students' request

5.2 Manage profile [SRS-REQ-200]

Nathania Grace Mahadevan [CB18166]

Requirement		Description
Source	Allocated	
SRS_REQ_20 1	SDD_REQ_20 1 SDD_REQ_20 3 SDD_REQ_20 5 SDD_REQ_20 6	Student and Lecturer can view their profile

SRS_REQ_20 2	SDD_REQ_20 2 SDD_REQ_20 4 SDD_REQ_20 5 SDD_REQ_20 6	Student and Lecturer can edit their details in their profile
SRS_REQ_20 3	SDD_REQ_20 1 SDD_REQ_20 3 SDD_REQ_20 5 SDD_REQ_20 6	Student and Lecturer can delete their profile

5.3 Manage supervisor hunting [SRS-REQ-300]

Manggaeswary Diya Das [CB18168]

Requirement		Description
Source	Allocated	
SRS_REQ_30 1	SDD_REQ_30 1	Students can view the lecturer's expertise
SRS_REQ_30 2	SDD_REQ_30 1 SDD_REQ_30 2	Students can book supervisors based on their expertise
SRS_REQ_30 3	SDD_REQ_30 1 SDD_REQ_30 2	Student can cancel the supervisor booking

5.4 Manage logbook [SRS-REQ-400]

Norhaniza Binti Syafrizal [CB19027]

Requirement		Description
Source	Allocated	
SRS_REQ_40	SDD_REQ_40	Student and lecturer can view on logbook records

1	1	
SRS_REQ_40 2	SDD_REQ_40 2	Student can add new record on logbook
SRS_REQ_40 3	SDD_REQ_40 3	Students can edit data of the record on the logbook database
SRS_REQ_40 4	SDD_REQ_40 4	Students can delete the selected records on the logbook database

5.5 Manage proposal [SRS-REQ-500]

Nur Nadia Syakirah Binti Mohd Sauki [CB19045]

Requirement		Description
Source	Allocated	
SRS_REQ_50 1	SDD_REQ_50 1	Students can view the status of their proposal request
SRS_REQ_50 2	SDD_REQ_50 2	Student can edit their proposal request and save to the database
SRS_REQ_50 3	SDD_REQ_50 3	Student can delete their proposal request from the database

5.6 Manage title [SRS-REQ-600]

Puteri Idayu Zulaika Binti Zafri [CB19032]

Requirement		Description
Source	Allocated	
SRS_REQ_60 1	SDD_REQ_60 1	Student can resubmit again a new proposal to the lecturer
SRS_REQ_60 2	SDD_REQ_60 2	The student can book the title.
SRS_REQ_60 3	SDD_REQ_60 3	The lecturer can view the selected title.
SRS_REQ_60	SDD_REQ_60	The lecturer can delete the title.

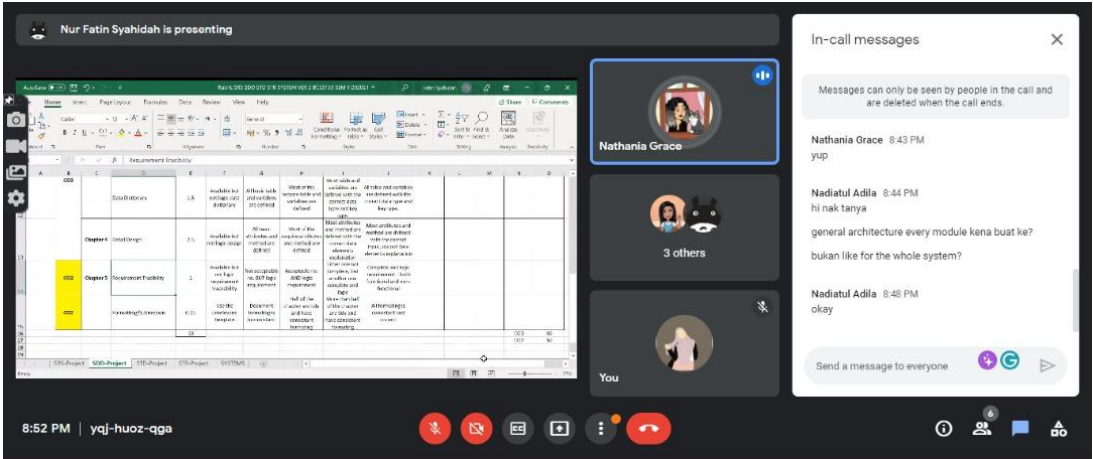

4	4	
SRS_REQ_60 5	SDD_REQ_60 5	The lecturer can edit the title.
SRS_REQ_60 6	SDD_REQ_60 6	The lecturer can add a new title.
SRS_REQ_60 7	SDD_REQ_60 7	The lecturer can give approval to the title booked by students.

5.7 Manage inventory [SRS-REQ-700]

Nur Fatin Syahidah Binti Mohd Zamri [CB19040]

Requirement		Description
Source	Allocated	
SRS_REQ_70 1	SDD_REQ_70 1	Students can request for inventory.
SRS_REQ_70 2	SDD_REQ_70 2	Students can view the request status whether it is approved or rejected.
SRS_REQ_70 3	SDD_REQ_70 3	The lecturer can view the student's inventory request and can approve or reject the application.
SRS_REQ_70 4	SDD_REQ_70 4	Lecturers can key in the pick-up item form.
SRS_REQ_70 5	SDD_REQ_70 5	Technicians can key in all the details of the pick up inventory after the lecturer picks up the student's inventory request.
SRS_REQ_70 6	SDD_REQ_70 1	Students need to request inventory again if the inventory request has been rejected by the lecturer.

6. MEETING REPORT

Objective	Task distribution
Platform	Google meet
Time & date	8.30pm 3/12/2021
Minute of meeting	The group discussed and went through the rubric.
Pic	 A screenshot of a Google Meet interface. The main window displays a presentation slide titled 'Requirement Traceability' with a table containing various requirements and their status. The table has columns for ID, Description, Status, and other details. The status column shows 'Not acceptable' for several items. To the right of the presentation, there is a vertical list of participants: 'Nur Fatm Syahidah is presenting', 'Nathania Grace', '3 others', and 'You'. Below the participants, there is a chat window titled 'In-call messages' showing a conversation between 'Nathania Grace' and 'Nadiatul Adila'. The chat messages include 'yup', 'hi nak tanya', 'general architecture every module kena buat ke?', 'bukan like for the whole system?', and 'okay'. The bottom of the screen shows the time '8:52 PM' and the name 'yqj-huoz-qga'.

Objective	Reminder to finish the sdd
